Market performance

- Asset returns were mixed over the period with as investors grapple with a range of macro-economic factors. Starting with equities, developed markets performed well overall led by the US and Japan. US equities generated the largest gains over the period although it's worth noting that much of index gains were driven by only a handful of mega capitalisation technology names (including Apple, Microsoft, NVIDIA for example). Outside of these names, market returns were relatively muted across smaller and value-oriented US stocks. Japan also performed well benefitting from improved economic outlook supported by strong consumer demand. Outside of the US & Japan, returns were less inspiring with European stocks finishing slightly positive while the UK was down modestly. Emerging Market and Asian equities finished lower as China's recovery post lockdowns has been patchier than anticipated.
- Bond markets had a more difficult time as inflation remains stubbornly high although we are starting to see some divergences on the direction of inflation across regions. The UK has suffered more than other regions with core inflation and wage growth both coming in over 7% in May. This resulted in the Bank of England raising interest rates to 5% and the markets now pricing in an even higher interest rate peak of around 6%. As a result, Gilts and UK corporate bonds were down in aggregate over the period. By contrast, the US has seen inflation falling from 9% to 4% over the past year as energy and shelter costs have come down although wages have climbed higher. Finally, Global corporate bonds finished the period flat while emerging market debt fell just under a percent.
- Commodities which were one of the best performing asset classes in 2022 have had a more challenging time over the quarter and YTD. Some of this recent weakness can be attributed to the markets anticipation of a global slowdown. In the case of energy, fears that the war in Ukraine would keep natural gas prices higher for longer proved to be less problematic as Europe experienced a milder winter and alternative suppliers ramped up production to meet demand. Also, there has been weakness across other base commodities as construction activities have not picked up meaningfully in China or the US.
- Looking ahead, while the macroeconomic environment is challenging, we're cautiously optimistic that some value is returning to certain sectors of the market, presenting greater opportunities for long-term investors. We still believe caution is warranted in this environment but are looking to take advantage of investment opportunities as they arise.

Notes:

Returns based on Total return, assuming income is re-invested immediately and rebalanced on due dates.

The performance of each asset class is represented by relevant indices and expressed in GBP terms, which are selected by Copia Capital Management. Reference to a particular asset class does not represent a recommendation to seek exposure to that asset class. *Maximum Return Drawdown is defined as the largest single drop from peak to trough of the value of an asset class or portfolio over any timeframe within the stated period. This information is included for comparison purposes for the period stated, but is not an indicator of potential maximum loss for other periods or in the future.

Outcome Charts

-0.73

As of 31-May-2023

-0.67

As of 30-Jun-2023

Based on our proprietary Prediction Algorithm the Copia Risk Barometer is reading -0.67 as of 30-Jun-2023, a change of +0.06 from last month, staying in the Red zone, indicating that the global economic outlook is still negative.

Primary drivers for the Risk Barometer:

- **Government bond markets:** Major global yield curves remain heavily inverted following a steep shift upwards in major developed market yield curves over the last year. This is a cautionary signal from the bond markets suggesting the liquidity fuelled rally in risk assets has come to an end. Historically recessions have followed 9 out of 10 times, 18 months from the point when the yield curve inverts and remains in inversion.
- **Equity market pricing:** YTD 2023 has seen a significant rally across markets as confidence has returned to developed markets and the reopening of the Chinese economy following the removal of the zero covid policy. This has resulted in increased risk barometer readings in the early portions of this year as positive momentum signals were picked up. While we see certain areas of the market continue to post increasing returns the breadth of market returns is very narrow. This lack of breadth is being picked in in the risk barometer reading with markets not including a handful of the top US tech names such as UK, global small-cap and emerging markets as an example having shown a slowdown in the weeks prior to May and significant negative returns in areas over the last number of weeks.
- **Credit Spreads:** The tight credit spreads which had underpinned positive sentiment in risk assets all through 2021 continue to be materially expanded. Rising Credit Default Swap indices indicate corporate bond investors have now priced in the probability of an inflation/Fed induced recession. Although these levels are not comparable to those seen during the Covid recession, the spreads have materially widened compared to levels seen in the months pre-covid. These spreads have remained at a relatively consistent level over the last number of months and while can be considered a risk off signal this presents opportunity in certain select areas of credit markets not available to investors over the last number of years.
- **Overall:** The Risk Barometer is picking up much more negative signals than positive with Equity, credit spreads and government bond markets presenting a cautious signal. These cautious signals have kept us in the red zone where we are cautious of the overall health of markets noting the lack of breadth of returns in equity markets while continuing seeing some value in certain select sectors of the market.

Note: The Risk Barometer score varies between -1.0 and +1.0. A score of -1.0 indicates an extremely poor economic outlook, which is accompanied by a high probability of negative returns in risky asset classes. A score of 0 indicates a neutral economic outlook with almost equal probability of positive and negative returns in risky asset classes. A score of +1.0 indicates an extremely positive economic outlook, which is accompanied by a high probability of positive returns in risky asset classes.

Risk Barometer history

- The top chart shows the market performance (best and worst returns) during different Risk Barometer regimes.
- The bottom chart shows how the Risk Barometer has moved between different regimes and the triggers for regime changes.
- The Risk Barometer is a forward-looking quantitative model that provides a systematic rules-based approach for dynamic risk management.

Note: The Risk Barometer score varies between -1.0 and +1.0.

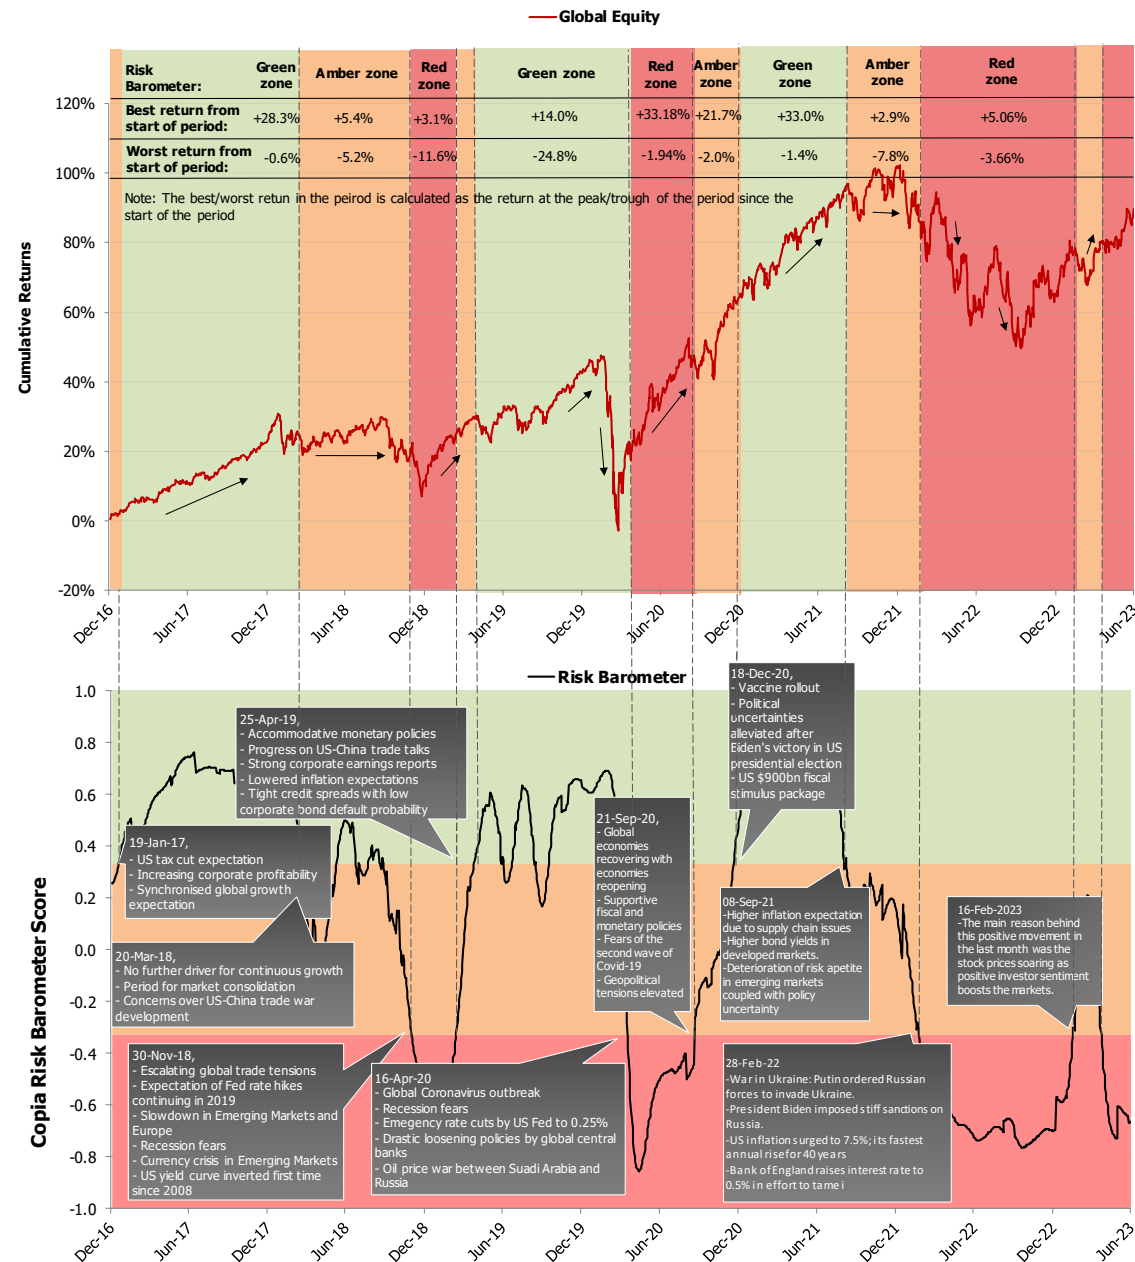

A score of -1.0 indicates an extremely poor economic outlook, which is accompanied by a high probability of negative returns in risky asset classes.

A score of 0 indicates a neutral economic outlook with almost equal probability of positive and negative returns in risky asset classes.

A score of +1.0 indicates an extremely positive economic outlook, which is accompanied by a high probability of positive returns in risky asset classes.

Source: Copia Capital Management, Refinitiv Datastream

Global Equities Returns is based on actual data of MSCI World Index for the period between 31-Dec-2016 and 30-Jun-2023.

Impact of dynamic risk management using the Risk Barometer

- Objective is to achieve similar levels of returns, with a narrower dispersion of returns (reduced tail risk)
- Can enhanced risk-adjusted returns
- Can deliver a smoother investment journey whilst mitigating downside risk
- We evaluate impact using a theoretical 60/40 portfolio with and without the Risk Barometer

	Annualised Return	Annualised Volatility	Sharpe Ratio	Maximum Drawdown
60/40 Portfolio	6.10%	8.41%	0.72	-25.40%
60/40 Portfolio with Tactical Tilts	6.01%	7.34%	0.82	-19.13%
Impact	→ -0.09%	↓ -12.78%	↑ 13.04%	↓ -24.68%

Note: 60/40 Portfolio consists of 60% allocation to MSCI World Index and 40% allocation US 10 year Bond Index rebalanced monthly. Figures are based on historic actual figures in GBP terms for the period 31-Jan-2000 and 30-Jun-2023. All return figures are before fees.

The 60/40 Portfolio with Tactical Tilts consists of dynamic allocation to MSCI World Index within a range of 40% to 60% driven by the Risk Barometer. The portfolio is rebalanced monthly and remaining allocation is to US 10 year Bond Index.

Outcome analysis as of 30 June 2023

Our 'Select Volatility' portfolio was previously known as 'Volatility Focus'.

*For illustration only.
Returns based on Total return, assuming income is re-invested immediately and rebalanced on due dates.*

Outcome (risk-return) analysis as of 30 June 2023

Our 'Select Accumulation' portfolio was previously known as 'Select'.

*For illustration only.
Returns based on Total return, assuming income is re-invested immediately and rebalanced on due dates.
The annualised risk and return figures are calculated based on a historic 5-year period as of 30-Jun-2023.
The performance figures for Select ESG portfolios include simulated data before the inception date of the Select ESG portfolios (31-Mar-2020).*

Outcome (cumulative return) analysis as of 30 Jun 2023

Our 'Select Accumulation' portfolio was previously known as 'Select'.

For illustration only.

Returns based on Total return, assuming income is re-invested immediately and rebalanced on due dates.

Available CPI data has been used as a comparator for real returns. CPI data for Jun 2023 is currently unavailable and not shown.

The cumulative returns are calculated based on the period from the inception date of the Select Accumulation portfolios (31-Oct-2016). The performance figures for Select ESG portfolios include simulated data before the inception date of the Select ESG portfolios (31-Mar-2020).

Outcome (annualised return) analysis as of 30 Jun 2023

Our 'Select Accumulation' portfolio was previously known as 'Select'.

For illustration only.

Returns based on Total return, assuming income is re-invested immediately and rebalanced on due dates.

Available CPI data has been used as a comparator for real returns. CPI data for Jun 2023 is currently unavailable and not shown.

The annualised returns are calculated based on a historic 5-year period as of 30-Jun-2023.

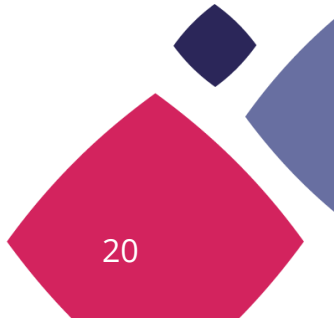

The performance figures for Select ESG portfolios include simulated data before the inception date of the Select ESG portfolios (31-Mar-2020).

Outcome analysis as of 30 Jun 2023

Our 'Select Decumulation' portfolio was previously known as 'Retirement Income'.

*For illustration only.
Returns based on Total return, assuming income is re-invested immediately and rebalanced on due dates.
The returns are calculated based on a historic 5-year period as of 30-Jun-2023.*

Outcome analysis as of 30 Jun 2023

Our 'Select Thematic' portfolio was previously known as 'Copia Enhanced Equity'.

For illustration only.

Returns based on Total return, assuming income is re-invested immediately and rebalanced on due dates.

Understanding the risks

- Investment model portfolios may not be suitable for everyone
- The value of funds can increase and decrease, past performance and historical data cannot guarantee future success
 - Investors may get back less than they originally invested
